

## **Sedgwick County EMS Associate EMS System Medical Director**

The Wichita/Sedgwick County EMS System is seeking well-qualified EMS physicians who are interested in candidacy for the role of Associate EMS System Medical Director.

The Wichita/Sedgwick County EMS System (W/SC EMSS) is a progressive physician-led system that has combined all the agencies that deliver EMS in the county under a single medical oversight process. This system approach requires that all agencies use a single set of protocols and participate in a system wide credentialing process that ensures all providers meet the same standards. This allows for impressive consistency in standard of care and creates a perfect environment for implementing state of the art care, research, and innovation.

The Professional Development (training/education) and Credentialing/Simulation (testing) programs report directly to the Associate EMS System Medical Director. The system has recently implemented high fidelity simulation, community paramedicine and critical care programs, and we have desire to further develop our tactical EMS, water rescue, USAR, and research programs with the help of the new Associate EMS System Medical Director.

The Associate EMS System Medical Director is expected to practice in the field, and will be provided a take-home emergency response vehicle and all necessary equipment for a physician level EMS field practice: communications/navigation equipment, medications, surgical kits (surgical airway, thoracotomy, perimortem c-section, and field amputation), uniforms, personal protective equipment, etc.

The Associate EMS System Medical Director will have 0.66 FTE dedicated to EMS, with the remaining clinical emergency medicine time split between two local hospitals. The combined compensation package will be \$250-280K/year + benefits. This position offers competitive compensation along with adequate time dedicated to the practice of EMS medicine.
