Core Content of EMS Medicine

2 MEDICAL OVERSIGHT OF EMS

• 2.2 EMS Systems

• 2.2.1 Public Safety Answering Points

- 2.2.1.1 Pre-arrival instructions
- 2.2.1.2 Dispatch
 - 2.2.1.2.1 Use of lights and sirens
 - 2.2.1.2.2 Prioritization of response
 - (e.g., determining local needs based on local resources)
 - 2.2.1.2.3 Tiered-response

Medical Directors and Dispatch

- Dispatch isn't really my concern.
- It's not really clinical, so it's not a medical director thing.
- It involves a separate agency that I have no control over.
- Dispatch just sort of happens and there's nothing I can do to make it better.
- **Dispatch is the entry point to the EMS system.**
 - If dispatch fails, the system fails!

Authority vs. Leadership

5

EMS Dispatch Components

PSAP = Public Safety Answering Point

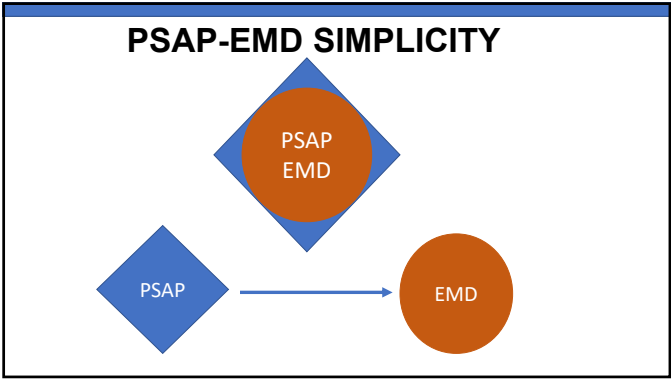

- AKA: "911 Center"
- Receives 911 call
- Determines service needs
- May perform EMD function or transfer caller to EMD
- May dispatch EMS unit(s)

EMD = Emergency Medical Dispatch

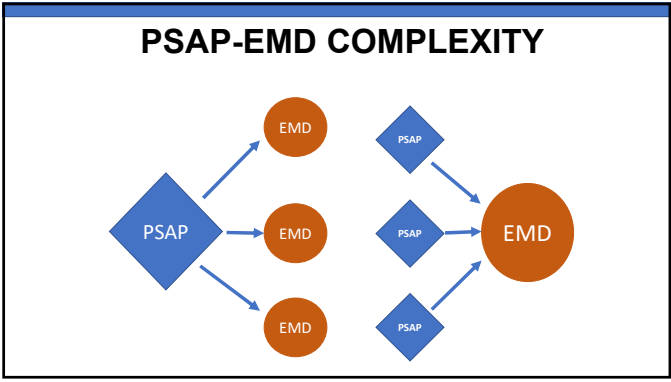

- Prioritizes Call
- Dispatches EMS unit(s)
- Pre-Arrival Instructions
- May be co-located with PSAP or separate
- "Secondary PSAP"

6

7

8

A Tail of Two Counties

Allegheny County, PA

- Area: 745 sq mi
- Population: 1.24 million
- 47 EMS Agencies

Single Countywide PSAP/EMD

Oakland County, MI

- Area: 978 sq mi
- Population: 1.25 million
- 48 EMS Agencies

21 PSAP/EMDs in County

Source: Federal Communications Commission. (2022, December). 911 Master PSAP Registry. Retrieved from <https://www.fcc.gov/general/9-1-1-master-psap-registry>

9

PSAP Operations

- >4,600 Primary PSAPs nationally
 - >240 million calls
- Call Taking
 - Via landline, cellular, text, VoIP, MLTS
- Automated Number Identification (ANI)
- Automated Location Identification (ALI)
- Provide EMD services (~54%)
 - or Transfer caller to separate internal/external EMD center (AKA: "Secondary PSAP")
- Dispatch all or some EMS/Public Safety units

911's deadly flaw: Lack of location data

A TECHNOLOGY SHORTFALL CAN LEAD TO TRAGIC RESULTS, A NATIONAL INVESTIGATION SHOWS.

John Kelly and Brandon Keefe, USA TODAY

Published 9:16 a.m. ET Feb. 22, 2015 | Updated 11:37 p.m. ET Feb. 22, 2015

"An estimated 10,000 people each year would be saved with accurate location standards from indoor cellphone calls,"

Source: <https://www.usatoday.com/story/news/2015/02/22/cellphone-911-lack-location-data/23570499/>

13

"New" FCC Rules

Wireless 911 Location Accuracy Rules

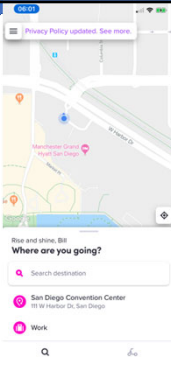

2015 Performance Standards

- 50m horizontal (x/y) accuracy
- 2017 40% reliability >>>> 2021 80% reliability

2019 Performance Standards

- 3m vertical (z-) accuracy
- 2021 80% reliability in top 25 CMAs
- 2023 80% reliability in top 50 CMAs

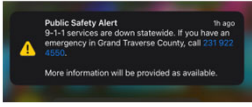

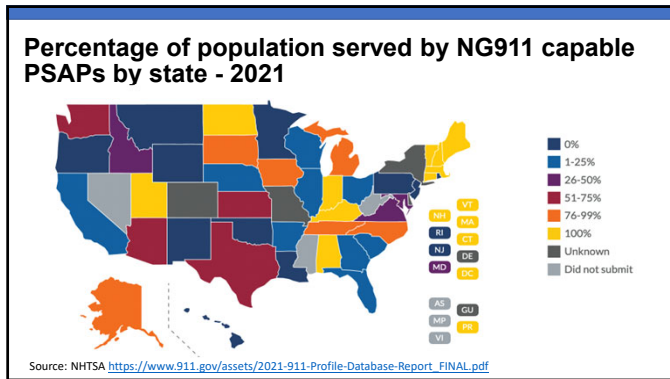

14

Next Generation 911 (NG911)

- Transition from analog to digital
- Exploit smart phone technology
 - Text messaging, photos, videos
- Emergency Services Internet Protocol (ESInet)
- Rollouts currently underway (but variable)
- Full implementation 2-4 years
 - Text to 911 now widely available but not universal

15

16

What 3 Words to the Rescue?

- Divides the world into 10' x 10' squares
- Give each square a 3-word name
- Free smartphone app
- PSAPs send a text with link to "find me" app

METRO
Mum and daughter are saved by police using app which finds people using three words.

First Responder Network Authority

- Mission to build, operate and maintain the first high-speed, nationwide wireless broadband network dedicated to public safety
- 9/11 Commission recommendation
- Became law in 2012 / Contract awarded 2017 / Launched 2018
 - Public – Private (ATT) partnership
- Provide a single interoperable platform for emergency and daily public safety communications – Band 14
- Provides priority access and preemption to emergency responders

Available to EMS Medical Directors

18

EMS Dispatch - Function

Call Taking, Pre-arrivals, and System Integration

19

Emergency Medical Dispatch

- **Responsibilities**
 - Call Prioritization
 - EMS Unit Dispatch
 - Pre-Arrival / Post Dispatch Instructions
- **Formal EMD System**
 - Protocol Driven
 - Guide card >>>>> computer
 - Avoids dispatcher free-lancing
 - Various national EMD systems
 - EMD Center Accreditation

20

EMD Call Prioritization

- **Purpose**
 - Send "right resource in right mode in right time"
 - BLS vs ALS vs BLS+ALS +/- 1st responders
 - Decrease emergency (lights/siren) responses
- Use structured, protocol-driven caller interrogation
- **Call Prioritization vs. Call Screening**
 - Call Screening – EMS response optional
 - Call Prioritization – EMS response assured

21

EMS Unit Dispatch

- **Confirm incident location**
 - Must re-confirm from PSAP
 - Secondary PSAP: EMD receives ANI/ALI
- **Computer-Assisted Dispatch (CAD)**
 - Tracks status of all EMS units
 - Integrates into vehicle GPS tracking
 - Documents all EMD activities
 - Critical times: response, scene, and transport times
 - Pushes data to patient care record
 - CAD to CAD integration connects PSAPs to EMDs
- **Alert responding unit(s)**

22

Pre-Arrival / Post-Dispatch Instructions

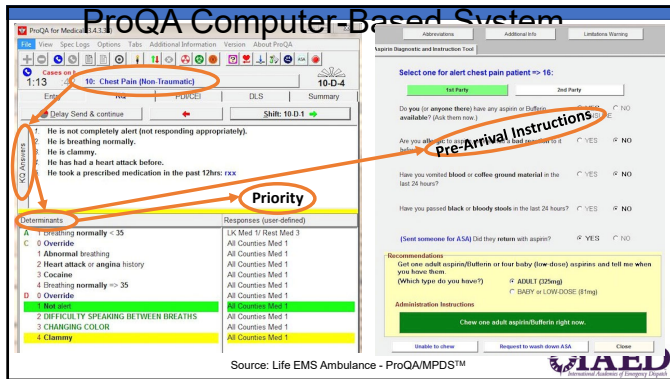

- Provide "Dispatch Life Support"
 - "Zero response time"
 - Dispatcher-Assisted CPR = Dispatch Life Support (DLS)
 - Where's the public AED?
 - "Crowd Sourcing" CPR (e.g., PulsePoint)
 - Assist in childbirth, give naloxone, give Epi autoinjector
- High public expectations
 - Increasing published evidence showing safety and efficacy
 - Liability for not offering?
- Use EMD Protocol Reference System

23

EMD Protocol Reference System

- **Initial Key Questions**
 - Universal caller interrogation
 - Goal: Identify Chief Complaint
- **Chief Complaint Categories**
 - 32 **Chief Complaints**
 - Complaint-specific **key questions** leads to **Determinants**
 - Determinants used for **Call Prioritization**
- **Scripted Medical Protocol**
 - Provides clear, simple instructions to caller
 - Medical director approval

24

25

2020 AHA Guidelines for CPR & Emergency Cardiovascular Care¹

- EMD Centers should offer T-CPR to patients in OHCA
- An adult victim who is unresponsive, with absent or abnormal breathing, should be considered to be experiencing OHCA and should immediately receive T-CPR instructions for chest compression only CPR.
- Emergency dispatch systems should alert willing bystanders to nearby events that may require CPR or AED use through mobile phone technology.
- The delivery of T-CPR instructions should be included in system quality improvement process.

Conscious

Breathing Normally

CPR Instructions

Part 7: systems of care: 2020 American Heart Association Guidelines for Cardiopulmonary Resuscitation and Emergency Cardiovascular Care. *Circulation*. 2020;142(suppl 2):S580-S604. doi: 10.1161/CIR.0000000000000899

26

Whoa on No-No-Go!

"...the IAED does not endorse the 2-question algorithm commonly known as the No-No-Go protocol, nor does it recommend, sanction, or support in any way its local adaptation into an existing MPDS implementation. While this protocol may suffice as the bare minimum for identifying OHCA in the absence of any structured protocol for telecommunicators receiving emergency medical calls, it should not be considered optimal...."

27

How Well Does EMD Work?

- Can we safely allow for decreased response configurations?
 - BLS instead of ALS
 - "Cold" response
 - Mobile Integrated Healthcare alternative
- What is an acceptable under triage rate?
- Are there consequences of over triage?
- Do Pre-Arrival Instructions work?

MORE RESEARCH IN EMD NEEDED!

28

Final Thoughts

- EMS Medical Directors should...
 - Champion high-quality EMS dispatch
 - Visit PSAPs and EMD centers (regularly)
 - Include dispatchers in debriefings
 - Don't forget when giving positive feedback
 - Make dispatch feel like part of the team (they are)
